Re: Traffic Signal and Multi Way Stop Analysis – Mary's Pond Road at Walnut Road

Dear Mr. Magee:

The Southeastern Regional Planning and Economic Development District (SRPEDD) have completed the analysis for the intersection of Mary's Pond Road and Walnut Plain Road per your request. The results of the analysis indicate that a traffic signal is not warranted for the intersection of Mary's Pond Road and Walnut Plain Road but a Multi Way Stop has been warranted. Enclosed is a technical memorandum that provides the recommendations for this location. Implementing these recommendations are anticipated to improve safety at this location.

If you have any questions regarding this information, please contact me, Lisa Estrela-Pedro or Luis de Oliveira on my staff.

Respectfully,

Paul L. Mission

Transportation Planning Manager

Technical Memorandum

To: Paul Magee, Rochester Chief of Police
From: Paul Mission, Transportation Planning Manager
Date: August 23, 2018
Re: Traffic Signal and Multi Way Stop Analysis – Mary's Pond Road at Walnut Plain Road

The town of Rochester formally requested a Traffic Signal Warrants Analysis for the intersection of Mary's Pond Road and Walnut Plain Road to be completed by the Southeastern Regional Planning and Economic Development District (SRPEDD). The intent of the analysis is to determine if a traffic signal would remedy any existing traffic safety at this intersection.

Existing Conditions and Site Observations

Mary's Pond Road intersects with Walnut Plain Road to form a 4-legged, unsignalized intersection located in the southeast portion of the town of Rochester (See Figure 1). Mary's Pond Road is a two lane roadway classified as an urban minor arterial (U-5) that runs in a east/west direction. Mary's Pond Road is approximately 23 feet with lane widths measuring approximately 10 ½ feet and shoulder widths varying from 8 inches to 1½ feet . Directional flow is divided by double yellow line pavement markings.

Walnut Plain Road is a stop controlled two lane roadway classified as an Urban Major Collector (U-6) with a road width measured at approximately 32 feet with lane widths measuring approximately 10 ½ feet and shoulder widths varying from 10 inches to 1½ feet . Directional flow is divided by double yellow line pavement markings. Mary's Pond Road and Walnut Plain Road are both maintained by the town of Rochester and eligible for federal aid funding for improvements.

Figure 1: Onset Avenue(Leonard Lopes Park) Data Collection Results

In addition to the stop signs at the north and southbound approach, stop lines with the word STOP are included on the pavement. The stop lines are located beyond the stop sign 26 ½ feet for the northbound approach and 24 feet for the southbound approach. While visiting the site, some vehicles were observed stopping at the stop and then at the stop line. Other vehicles will only stop at the stop sign or stop line before proceeding through the intersection. It was also observed that based on the way the angle of the intersecting roads and the north east and southwest curb radius, the stop lines are almost within the eastbound travel lane (at the northbound approach stop line) and westbound approach travel lane (at the southbound approach stop line). Efforts in improving the safety issues at the intersection have been made. Advance warning signs indicating a stop ahead have been installed at the north and southbound approach as well as intersection ahead signs at all approaches

Traffic Volume Data and Analysis

Automated Traffic Recorders (ATRs) were placed at each leg of the intersection in June of 2018 to collect 24-hour volume, class and speed data. This information is necessary to determine if the intersection will require or warrant a traffic signal. Data collected indicates that Mary's Pond Road carries approximately 2,100 vehicles per day (vpd) east of and 2,600 vpd west of Walnut Plain Road. Walnut Plain Road carries approximately 2,500 vpd north of and 2,100 vpd south of Mary's Pond Road. The overall results from the ATRs are displayed in Table 1.

Table 1: Existing Traffic Count Data

LOCATION	Weekday Average	Total
Walnut Plain Road north of Mary's Pond Road	1,193 NB	1,267 SB
Walnut Plain Road south of Mary's Pond Road	1,020 NB	1,080 SB
Mary's Pond Road east of Walnut Plain Road	1,065 EB	1,076 WB
Mary's Pond Road west of Walnut Plain Road	1,288 EB	1,308 WB

Vehicle Crash Data

Three years of crash data (2015 to 2017) provided by the Rochester Police Department was reviewed. During this period, there was a total of nine crashes at the intersection. All off the crashes were reported as angle crashes, shown in Table 2 on the next page, which indicates that motorists failed to yield right-of-way. The most recent year, 2017, experienced five of the angle crashes at this location. The crash reports also indicate that 6 of the crashes involved the northbound and eastbound approaches and the other three involved the southbound and westbound approaches.

Table 2: Crash Data Summary

CRASH SEVERITY		MANNER OF COLLISION	
Property damage only (PDO)	9	Angle	9

DAY OF THE WEEK		TIME OF DAY		TIME OF YEAR	
Sunday	2	10AM-12PM	1	Spring (Mar-May)	2
Monday	3	12PM-2PM	2	Summer (Jun-Aug)	3
Tuesday	4	2PM-4PM	2	Fall (Sep-Nov)	4
Wednesday	1	4PM-6PM	2		
Saturday	2	6PM-8PM	2		

LIGHT CONDITION		SURFACE		WEATHER	
Daylight	7	Dry	8	Clear	8
Dark/Road Not Lit	2	Wet	1	Rain	1

To determine if there is a significant crash problem at the intersection, the Equivalent Property Damage Only (EPDO) was calculated. The EPDO index allows intersections to be ranked based on the severity of collisions. Greater importance is given to crashes in which injuries or fatalities have occurred. A point system is applied to each crash: one point for a crash involving vehicular property damage only; five points for a crash that involved one or more personal injuries; and ten points for a crash in which a fatality occurred. The SRPEDD regional average for the EPDO rate is 15. Using crash reports from 2015 to 2017, calculations indicate that the EPDO crash rate for the intersection is 3 which is below the regional average.

Signal Warrants Analysis and Multiway Stop Control Analysis

A signal warrants analysis and multiway stop control analysis were conducted using PC Warrants software to determine the need for the installation of a traffic signal or multiway stop control at this intersection. The analysis is based on a series of thresholds (referred to as warrants) that examine traffic volume and crash data as defined in the MUTCD. The MUTCD is the definitive national authority on the design, placement and use of all traffic controls. The manual defines the parameters to help eliminate the installation of unnecessary, inappropriate, ineffective, and confusing traffic controls. A warrants analysis is generally the first step in determining the need for, and ultimately the installation of traffic control devices.

There are nine warrants considered as part of the signal warrants analysis, but the satisfaction of a warrant or warrants is not in itself justification to install a signal system. The MUTCD states:

- A traffic signal should not be installed unless an engineering study indicates that installing a traffic control signal will improve the overall safety and/or operation of the intersection,
- A traffic signal should not be installed if it will seriously disrupt progressive traffic flow.

The results of this signal warrants analysis indicates that a traffic signal is not warranted at this intersection. The Eight-Hour Warrant (Warrant #1) which is a major consideration in the decision to install a traffic signal did not meet warrants nor did any other volume warrant. The low volume on the road indicates that a signal would not improve safety at this location.

The Signal Warrants Analysis results are shown in Table 3.

Table 3: Signal Warrants Analysis Results

WARRANT	CONSIDERS	RESULTS
Eight-hour volume (#1)	Eight-hour vehicular volume	Not Satisfied
Four-hour volume (#2)	Four-hour vehicular volume	Not Satisfied
Peak hour volume (#3)	Volume and delay on minor street	Not Satisfied
Pedestrian volume (#4)	Pedestrian volumes and gaps	Not Evaluated
School Crossing (#5)	Number of children crossing and gaps	Not Evaluated
Coordinated Signal System (#6)	Proximity to nearby traffic control signals	Not Satisfied
Crash Experience (#7)	Crash severity and frequency	Not Satisfied
Road Network (#8)	Projected volumes and roadway characteristic	Not Satisfied
Int. Near a Grade Crossing (#9)	Proximity to a Grade Crossing	Not Evaluated

As stated in the MUTCD, *Multi-way STOP sign control may be appropriate for locations where the volumes of traffic on the intersecting roads are approximately equal, and it is not readily apparent which is the major through street.*

For Multiway stop controls, one of the following criteria should be satisfied in order for a multiway stop control to be considered:

- A. *Where a traffic signal is justified, a multi-way stop is an interim measure that can be installed quickly to control traffic while arrangements are being made for a traffic signal to be installed. (Does not Apply for this study)*

- B. Five or more reported crashes which are considered correctable occurred within a 12 month period
- C. Minimum Vehicular Volumes
 - 1. The Major street approaches (total of both) averages at least 300 vehicles per hour for any 8 hours of an average day; **and**
 - 2. The Minor street approaches (total of both) averages at least 200 units per hour for the same 8 hours, **but**
 - 3. If the 85th-percentile speed of the major-street traffic exceeds 40 mph, the minimum vehicular volume warrants are 70 percent of the values provided in 1 and 2.
- D. Where no single criteria is satisfied, but B, C.1, and C.2 are all satisfied to 80 percent of the minimum values

The results of multi way stop control analysis indicates that a multi way stop is warranted at this intersection. The Crash Experience(Criteria B) requires 5 correctable accidents during a 12-month period. Although the Crash Experience was the only warrant which was met , in the case of the Multi Way Stop Control Warrant, only one of the criteria's needs to be met. The multi way stop control analysis results are shown in Table 4.

Table 4: Multi Way Stop Analysis Results

WARRANT	CONSIDERS	Criteria Status
Crash Experience (B)	Eight-hour vehicular volume	Satisfied
Volumes and Delays (C)	Four-hour vehicular volume	Not Satisfied
80% of Volumes, Delays and Accidents (D)	If B, C1 and C2 are all met to 80%.	Not Satisfied

Additional Recommendations

Although a multiway stop is warranted at the intersection, the following recommendations would also assist in improving safety at the intersection. Figure 2 on the next page shows that the stop sign at the southbound approach is obstructed by a utility pole and vegetation and is not visible until vehicles are closer to the intersection. Although an advanced warning sign indicating a stop sign at the intersection has been installed farther back, it is recommended that the vegetation be trimmed and the stop sign be moved away from the utility pole if possible. For better visibility, a second stop sign may be placed on the opposite side of the road of the southbound approach. If this approach is taken, it is recommended that the town repaint the double yellow line as needed so that vehicles approaching the intersection do not mistake the road as one way.

Figure 2: Hidden Stop Sign at the Southbound Approach

As stated under the exiting conditions, the stop lines are located beyond the stop sign $26 \frac{1}{2}$ feet for the northbound approach and 24 feet for the southbound approach. Stop lines indicate the point at which the stop is intended or required to be made. Many of the crash reports indicate that motorists made a complete stop at the stop sign before proceeding into or rolling forward into the intersection. It is recommended that the stop line be placed closer to the stop sign and further back from the intersection. This will prevent confusion of where the stop should be made and prevent vehicles from stopping within the eastbound and westbound travel lanes as they approach or go beyond the stop line. This remedy would currently cause a conflict as vehicles traveling northbound and southbound have better sight distance (Figure 3 and 4 on the next page) when at the stop line rather than at the stop sign (Figure 5 and 6 on the next page) due to vegetation at the intersection. As seen in Figure 3, those stopped at the northbound approach have poor sight distance of the vehicles traveling eastbound and westbound. The same applies to those stopped at the southbound approach and as seen in Figure 4 which have poor sight distance of the vehicles traveling eastbound. Poor sight distance may have contributed to some of the crashes that occurred between the northbound and eastbound approaches. It is recommended that the vegetation be trimmed to improve the sight distance at the intersection from the stop sign. This remedy would prevent vehicles from pulling forward past the stop sign before proceeding through the intersection and would assist in placing the stop line and stop sign farther back from the intersection.

Rochester

Mary's Pond Road @ Walnut Plain Road

Signal Warrants - Summary

Major Street Approaches

Eastbound: MARY'S POND ROAD

Number of Lanes: 1

85% Speed > 40 MPH.

Total Approach Volume: 1,326

Westbound: MARY'S POND ROAD

Number of Lanes: 1

85% Speed > 40 MPH.

Total Approach Volume: 1,099

Minor Street Approaches

Northbound: WALNUT PLAIN ROAD

Number of Lanes: 1

Total Approach Volume: 1,019

Southbound: WALNUT PLAIN ROAD

Number of Lanes: 1

Total Approach Volume: 1,244

Warrant Summary (Rural values apply.)

Warrant 1 - Eight Hour Vehicular Volumes	Not Satisfied
Warrant 1A - Minimum Vehicular Volume	Not Satisfied
Required volumes reached for 0 hours, 8 are needed	
Warrant 1B - Interruption of Continuous Traffic	Not Satisfied
Required volumes reached for 0 hours, 8 are needed	
Warrant 1C - Combination of Warrants	Not Satisfied
Required 1A volumes reached for 0 hours, 8 are needed	
Required 1B volumes reached for 0 hours, 8 are needed	
Warrant 2 - Four Hour Volumes	Not Satisfied
Number of hours (0) volumes exceed minimum < minimum required (4).	
Warrant 3 - Peak Hour	Not Satisfied
Warrant 3A - Peak Hour Delay	Not Satisfied
Approach volumes on minor street don't exceed minimums for any hour. Delay data not evaluated.	
Warrant 3B - Peak Hour Volumes	Not Satisfied
Volumes do not exceed minimums for any hour.	
Warrant 4 - Pedestrian Volumes	Not Evaluated
Warrant 5 - School Crossing	Not Evaluated
Warrant 6 - Coordinated Signal System	Not Satisfied
No adjacent coordinated signals are present	
Warrant 7 - Crash Experience	Not Satisfied
Number of accidents (5) meet minimum (5) but volumes do not.	
Warrant 8 - Roadway Network	Not Satisfied
Major Route conditions not met. No volume requirement met.	
Warrant 9 - Intersection Near a Grade Crossing	Not Evaluated
